New Solutions for Mobile Payment, Table Games, and Count Room Headline JCM Global's G2E 2022 Appearance

LAS VEGAS (Sept. 27, 2022) -- JCM Global® (JCM) and its partners are the industry leaders in cash management and automation solutions across the entire casino floor, in the cage, and in the count room.

JCM's spirit of innovation continues to propel the gaming industry forward, and in booth #4039 at G2E 2022, JCM will showcase transaction and automation solutions for the modern casino business industry, including new mobile payment technology, its newest solution for table game security as well as the latest count room solution from its partner CPS. The products are the latest in JCM's leading technology roadmap that help operators of all sizes enhance the guest experience, increase efficiencies, and boost security.

Expanding on the FUZION® system's mobile payment options for both EGM's and table games, JCM will present its new BLE Mobile I/O® contactless technology. BLE Mobile I/O joins JCM's NFC Mobile I/O button and enables casinos to select the best mobile payment solution for their business and security needs.

JCM's BLE Mobile I/O

Table games will be more secure and efficient with JCM's new iVERIFY™ system technology. Using high-resolution cameras and optical recognition technology, iVERIFY tracks and records currency and TITO transactions at live table games by verifying cash buy in, TITO tickets, and tracks the chip inventory in the tray.

In the table games area of its booth, JCM will also show CountR's award-winning TITA™ table game solution. With TITA, players can easily redeem tickets and other cashless funds for chips, access funds via debit card with the POS, and convert winnings into tickets and cashless, all directly at the table.

A section of JCM's booth will be dedicated to count room automation solutions populated with products from JCM's partner CPS, a world leader in count-sort equipment, including CPS' new XM Range™. The XM Range provides flexible

fitness sorting with its expandable modular stacker design and three rapid-select speed options. Processing up to 60,000 banknotes per hour, the XM Range has a large feeder capacity of up to 1,000 notes and dynamic pocket allocation to deliver a variety of cash handling processes.

Other products in the count room area are CPS V Series™, CPS 7000i™, CPS ECM™ software, the Cassida Zeus, and JCM's own ICB ASAP®, an advanced count room solution driven by robotic automation.

Also on display are JCM's core products: the iVIZION® and UBA Pro® bill validators, the GEN5® Thermal Printer, and CouponXpress® printer. JCM system solutions include BlueWave®, PromoNet®, Intelligent Cash Box system (ICB®), and FUZION technology, where new cashless partnerships further enhance the technologies capabilities.

Overhead, JCM will showcase a broad range of Digital Signage Solutions™, including DDS FLEX™, CUBE™, and VB-DIAMOND™.

Discover JCM's roadmap to the future of gaming in G2E booth #4039.
