

iCARE Asks ‘Are You Contagious’ At the 2021 G2E Conference in Vegas

Visit Booth 2736 to Meet Those Bringing an Affordable COVID-19 Testing Solution to Casinos and the Gaming Industry

As the world continues to battle the COVID-19 virus and its rapidly evolving variants, [iCARE](#) is leading a revolutionary next phase of COVID-19 testing that actually answers the most important question: “Are you contagious?”

iCARE’s rapid antigen testing solution offers an affordable and efficient opportunity to combat the COVID-19 pandemic. These tests only show a positive result if one is contagious, an important differentiator from PCR (Polymerase Chain Reaction) tests which show positive results for days and sometimes weeks after one is no longer contagious.

The iCARE EUA (Emergency Use Authorization) rapid antigen test is available for wholesale and bulk purchase by business owners who are CLIA (Clinical Laboratory Improvement Amendments) certified. If business owners don’t have a CLIA certificate, they can apply to operate and administer these antigen tests under iCARE’s CLIA license. The iCARE team can provide businesses with training, equipment and software to promote a COVID-19-free environment, in addition to the rapid antigen tests.

Results come in 15 minutes, making this test a fast, easy, reliable and cost-effective solution to continue battling the COVID-19 pandemic. By purchasing these tests at wholesale prices (starting at \$9.99 per test), business owners can finally feel they have an opportunity to control the potential spread of the virus and protect their patrons.

“We are a privately owned company run by passionate, caring people with a mission to make schools, churches, casinos, businesses, airports, cruise lines, etc and any other location COVID-free by entrance testing,” says Mirko Manfredi, Founder and CEO of iCARE. “The end goal is to remove COVID-19 from the USA.”

Mirko and his wife and business partner Mia Kim first launched [Rapid Tests Hawaii](#) to ensure anyone could afford and have access to rapid antigen tests on the islands.

Kim and Manfredi will be at Booth 2736 at the G2E Conference in Vegas discussing this testing solution, their insights into the ever-expanding COVID-19 testing and diagnosis world and how iCARE can positively impact the gaming, casino and hospitality industries at large.

“We have realized that until COVID-19 is controlled, the world can’t go back to how it was. The only way to do this is by rapidly identifying contagious people and isolating them immediately,” says Manfredi. “The only way is through repeated antigen testing weekly.” Manfredi continues by explaining how iCARE’s work in Hawaii is transferable to the Vegas community.

“The Native American population shows many similarities to the Native Hawaiians, and our mission is to help everyone in the rest of the States just like how we have already helped

those in Hawaii. We want to show how this can be done if we work together and bring an impactful testing solution to casinos and the gaming industry in Vegas.”

iCARE Testing Solutions:

- Bulk test orders start at \$9.99 per test
- Tests administered at a licensed facility start at \$29.99 per test
- 15-minute results
- Additional test pricing for specific orders is available: <https://icaretests.com/>
