

PRESS RELEASE

FOR IMMEDIATE RELEASE:

Gaming Technology Group presents vast array of Gaming System & Kiosk Solutions at G2E, including Biometrics & Enhanced Player Touch Screen Displays with Exciting Content

Las Vegas, NV, 10/4/18 – Gaming Technology Group (GTG), a leader in advanced, affordable systems for Casinos, Tribal Gaming and Slot Routes, today announced their gaming system solutions and kiosks that will be showcased at G2E 2018, Booth #2836. GTG will also introduce a Biometric fingerprint login, with advanced Biometrics technology! This anonymous biometric login capability, combined with greatly enhanced Player Touch Screen Displays with exciting content, makes GTG's product line a winning combination.

Highlights of GTG's G2E portfolio:

GTG's product line-up will showcase two robust gaming systems, as well as a Loyalty Kiosk, Ticket Redemption Kiosks and Soft Count machines. "Our solutions provide complete, affordable options for Casinos of all sizes and Slot Routes," said Jon Whipple, CEO of GTG. "Each of our two distinct product lines provides complete, end to end solutions, scalable for small to mid-sized operators. We are particularly eager to show our latest in Player's Club Biometric Technology, through our affiliation with Biometrics One, which provides operators a competitive edge." **Eventually, our system functionality will become enhanced by BIBO (Biometric In/Biometric Out), a futuristic gaming payment replacement for ticketing."**

GTG's UltraLinx system (<http://gamingtechnologygroup.com/products/ultralinx>) is a full Casino Management System, with a suite of tools including Slot Accounting, Downloadable Credits, Ticketing, Robust Reporting, Player Tracking and more. GTG this year will be showing a much more enhanced Player Touch Screen Display with exciting content, which provides more detailed player account transactions and thrilling promotions. It is also available with three optional options: a Promotional Kiosk, Ticket Redemption Kiosks, and Soft Count Machines.

These scalable options have huge benefit to operators:

- *PromoLinx* Loyalty Kiosk:

PromoLinx is premier revenue-driving tool for casinos. It gives operators the power to calibrate each offer, benefit, reward and message to each guest, based on their individual value to the casino. *PromoLinx* (<http://gamingtechnologygroup.com/products/promolinx>) is the most affordable Full-Service Loyalty Kiosk in the industry. With a 42-inch vertical touchscreen and a magnetic-swipe card reader, as well as a voucher, receipt and coupon printer, it allows individualized player experiences based on their casino value, including exciting check-in events and games, as well as Swipe & Win, Earn & Get, Pick & Win, and Drawings.

- *CashLinx* Ticket Redemption Kiosks:

GTG welcomes VNE, Europe's Largest Redemption Kiosk Provider, to America! GTG is VNE's official US distributor for their Cash and Ticket Redemption Kiosks, which provide very strong cash management services for operators needing a more affordable solution. It provides players with ticket redemption, bill breaking, ATM amenities, and sports betting functionality. Its smaller size and ergonomic design is easy to use, intuitive and flexible. It allows easy access, while still maintaining high security standards.

- *CountLinx* Soft Count Machines:

CountLinx are small but mighty, multi-pocket soft count currency and ticket processors. *CountLinx* (<http://gamingtechnologygroup.com/products/countlinx>) is fast and flexible and provides an economical, secure, cash and ticket processing solution. It is available with either 3 or 5 pockets, and its ergonomic design is easy to use and flexible. While its footprint is small, it is amazingly fast, processing 1,200 notes per minute.

GTG's second system solution is for smaller operations, including slot routes or restricted gaming license operations:

GameLinx is a ticketless system that tracks all machine activity, and provides real-time metering, monitoring, and payout functions to optimize your gaming operation. *GameLinx* has an easy to use interface, and its touch screen POS terminals enable employees to interact with customers effortlessly for payout and jackpot processing. It is easy to learn, and new employees can be fully trained to operate it in minutes. *GameLinx Pay* can be added to provide the security of a dispenser.

PlayerLinx: links to *GameLinx* to provide a comprehensive loyalty program with benefits that rival those of much larger operations. At G2E we will be showing several new features, including anonymous *Biometric fingerprint login*! Logging in biometrically rather than by pin code allows for a cardless players club, which translates into increased player club membership with anonymous credentials. Additionally, GTG's new *PlayerLinx* Player Touch Screen Display allows graphical imagery for marketing messages and promotions. It also shows point status and exciting promotions that fully engage the player. All of these new features bring *PlayerLinx* to the next level, and will inspire player loyalty, increase play, entice new customers and provide more player data for better reporting.

About Gaming Technology Group

GTG is an industry leader in affordable slot, cash management and player loyalty systems for small to mid-sized gaming operations. GTG was formed in May, 2010 as a spin off from its predecessor, Western Money Systems. With its flagship *GameLinx* and *PlayerLinx* systems, and its full Casino Management System, *UltraLinx*, GTG currently has installations in nearly locations 150 within Nevada, and is currently expanding into other markets. GTG has offices in both Reno and Las Vegas, Nevada, with headquarters in Las Vegas.
