Latest Version of InfoGenesis® POS Offers EMV, Mobility Innovations, Enhanced User Features and Improved Wireless Network Performance

Agilysys Continues to Expand its Award-Winning Enterprise POS Mobility Offering

ALPHARETTA, GA. — Sept. 28, 2016 — Agilysys, Inc. (Nasdaq: AGYS), a leading global provider of next-generation hospitality software solutions and services, today announced the latest version of its award-winning InfoGenesis® POS. Approved earlier this month by the Nevada Gaming Control Board, InfoGenesis POS v4.4.8 continues to demonstrate Agilysys' hospitality solutions leadership, with support for EMV and a set of innovative enhancements designed to boost efficiency, improve the user experience and increase revenue.

InfoGenesis POS is Agilysys' comprehensive point-of-sale system that combines easy-to-use terminal and tablet touchscreen applications with industry-leading offline capabilities. Designed for multi-unit and complex operations, its enterprise-grade menu and item configuration capabilities, strong reporting and analysis features, and multi-language support drive service flexibility and increase operational efficiency. The system easily manages any combination of food, beverage and retail services, and integrates with other Agilysys applications and a wide variety of third-party offerings. InfoGenesis Flex, which offers full point-of-sale functionality on a convenient tablet device, provides a guest-centric feature-rich mobile experience for poolside, casino floors, outdoor patios, convention floors, and other foodservice operations. InfoGenesis POS and InfoGenesis Flex are available as on-premise or Software-as-a-Service (SaaS) solutions.

InfoGenesis POS v4.4.8 features a number of enhancements, including:

- EMV chip-and-signature and chip-and-pin processing capabilities (U.S.)
- Enhanced wireless network performance
- Ability for property to set an off-line wireless signal strength threshold
- Right hand/left hand preference capabilities for mobile users
- Enhanced administrative and management controls via additional reports and improved auditing
- Order display font size adjustment capability for smaller screen mobile tablets, eliminating the need to maintain separate menu configurations
- Reorder round capability
- More deployment options

"Guest confidence is often created or destroyed at the point of sale, so it's critical that casinos, hotels, restaurants and other hospitality venues implement technology that helps them work smarter and more efficiently," said Maris Berzins, vice president of product engineering at Agilysys. "The latest version of our InfoGenesis POS system includes new features and functionality that improve wireless network performance, enhance the user experience and boost mobility — all while integrating EMV chip-and-pin and chip-and-signature payment processing in a way that recognizes and addresses the special requirements of the hospitality industry. Agilysys continues to expand its enterprise POS mobility offering to more fully address customer needs, and we are excited to bring this state-of-the-art version to market."
