## SYNKROS

In the [SYNKROS](#) area of Konami's 2020 NIGA display, gaming professionals and executives encountered leading-edge solutions to reach, engage, understand, monitor, and reward casino guests. The company's award-winning casino management system featured a top lineup of technology, including its SYNK Vision facial recognition and all-in-one Title 31 / AML system SYNK31. Guests can experience these and several other award-winning systems solutions firsthand throughout the 2-day event.

## SYNK Vision™

[SYNK Vision](#) is a biometric player tracking solution that uses facial recognition to identify, rate, and reward all players, regardless whether they are members of the established player loyalty program. It tracks players automatically based on their unique facial characteristics rather than requiring them to manually sign up or use a player's tracking card. When players with an existing account sit down at a slot machine or table game, SYNK Vision recognizes them and displays their name with a welcome message without any manual input. Or if the player has not registered a loyalty account, his or her biometric identify is assigned a personal anonymous account for ongoing engagement and tracking. This enables casino operators to truly see, analyze, rate, and reward all "carded" and "uncarded" play activity on their floor for the first time.

## synk31™

Konami's new [SYNK31](#) is a comprehensive Title 31 Anti-Money Laundering (AML) system that allows permissioned SYNKROS administrators to gather, track, review, and complete all AML requirements, including Multiple Transaction Log (MTL), Negotiable Instrument Log (NIL), Suspicious Activity Reporting (SAR), Currency Transaction Reporting (CTR), Know Your Customer (KYC) and more.
